Starting Formulation

SF 1011

White Enamel

EPON™ Resin 1001-CX-75 / EPIKURE™ Curing Agent 3213

Features
- High performance chemical and solvent resistant topcoat
- Formulated for spray application
- Desirable mixing ratio of 3 to 1 by volume
- Formulation contains no ethylene glycol ether solvent

Formula | Material | Supplier | Pounds | Gallons
---|---|---|---|---
Part A | Pigments | Ti-Pure R-960 | Du Pont Company | 240.2 | 6.87
| Phthalocyanine Blue | Trace | Trace |
| Mistron CF5A | Luzenac America, Inc. | 32.5 | 1.37
Vehicle | EPON Resin 1001-CX-75 | Hexion | 264.4 | 29.06
| CYMEL U-216-8 | Cytec Industries | 12.1 | 1.43
| Methyl isobutyl ketone | Shell Chemical Company | 29.8 | 4.48
| High Speed Disperse to Grind Hegman 7-8 | || |
Propylene glycol methyl ether | 55.4 | 7.24
Cyclohexanol | 7.5 | 0.95
Xylene | Shell Chemical Company | 35.8 | 5.00
Toluene | Shell Chemical Company | 133.3 | 18.60
| Total Part A | 811.0 | 75.00
Part B | EPIKURE Curing Agent 3213 | Hexion | 98.4 | 12.00
| Methyl isobutyl ketone | Shell Chemical Company | 86.3 | 13.00
| Total Part B | 184.7 | 25.00
| Total Part A & B | 995.7 | 100.00

Nothing contained herein constitutes an offer for the sale of any product.
Disperse the pigments in a suitable portion of the vehicle using high speed dispersing equipment or a sand mill. Let down the pigment dispersion with the remaining vehicle. Charge the two ingredients of the curing agent component to a separate suitable container and mix thoroughly. Package the base component and the curing agent component separately to be combined just prior to use.

Typical Handling Properties

Slowly combine three parts by volume of base component with one part by volume of curing agent component and mix thoroughly. Allow the mixed formulation to "sweat in" for one hour. The system is then ready for spray application. Because of the limited pot life of the mixed formulation, do not mix more material than can be used in a working day. For application of this system in confined or poorly ventilated areas, we recommend the use of a fresh air supply and good and other protective clothing sufficient to cover the applicator’s entire body.

The application methods for an EPON Resin 1001F/EPIKURE Curing Agent 3213 White Enamel can involve the use of air or airless spray equipment, roller or brush. This system is normally air dried but can be force cured by baking if desired. This operation requires the use of well ventilated facilities (fresh air supply and adequate exhaust) along with the use of OSHA/NIOSH approved respiratory equipment for worker protection. In addition, the worker must wear appropriate protective clothing to avoid skin contact.

Cure Schedules Table 2 / Cure Schedules

At ambient temperatures of 70°F to 80°F, this coating will dry to handle in about six hours. Physical properties will be fully developed in about two days. Chemical and solvent resistance will be fully developed in seven days. At ambient temperatures of 55°F, several weeks may be required to produce full cure, as the adduct curing agent used in the formulation has low volatility and will remain in the film to react with the epoxy resin.

### General Information

These are starting formulations and are not proven in the user’s particular application but are simply meant to demonstrate the efficacy of the products and to assist in the development of the user’s own formulation. It is the user’s responsibility to fully test and qualify the formulation, along with the ingredients, methods, applications or equipment identified herein (“Information”), by the user’s knowledgeable formulator or scientist, and to determine the appropriate use conditions and legal restrictions, prior to use of any Information.

### Safety, Storage & Handling

Please refer to the MSDS for the most current Safety and Handling information.

Exposure to these materials should be minimized and avoided, if feasible, through the observance of proper precautions, use of appropriate engineering controls and proper personal protective clothing and equipment, and adherence to proper handling procedures. None of these materials should be used, stored, or transported until the handling precautions and recommendations as stated in the Material Safety Data Sheet (MSDS) for these and all other products being used are understood by all persons who will work with them. Questions and requests for information on Hexion Inc. (“Hexion”) products should be directed to your Hexion sales representative, or the nearest Hexion sales office. Information and MSDSs on non-Hexion products should be obtained from the respective manufacturer.
