Starting Formulation

SF 4023 One-Package Adhesive 828 and 58034 Latent One-Package Adhesive for Oily Steel
EPON™ Resin 828 and 58034 / Latent Curing Agents

Introduction

These starting point one-package adhesive formulations are especially suited for metal – metal bonding when the metal surfaces have a small amount of residual drawing oil, such as often encountered in automotive body assembly operations.

Suggested Uses

- Automotive stamped metal flange adhesives and other applications where metal panels may be contaminated with small amounts of residual drawing fluids/oils which cannot be removed before assembly.

Features

- One Pack
- Adhesion to stamped metal contaminated with small amounts of drawing oil
- Service temperatures up to 121°C (250°F)

Mixing Instructions

A high speed mixer (such as a Cowles) can be used; however, care should be taken to keep temperature as low as possible. Temperatures should be kept below 45°C (115°F).

Load EPON Resin 828 at room temperature or lowest practical temperature for your pumping equipment.

Add and disperse Kevlar pulp starting at 25 – 30°C. Higher viscosity (due to lower temperature) helps break-up and disperse the pulp.

Add curing agent and catalyst powders and mix until a smooth, uniform blend is achieved.

This formulation is a basic starting point and can be modified with other filler types, such as talc, clay, alumina, ground silica, wollastonite, or calcium carbonate.

This document contains information about adhesive properties, application instructions, cure schedule, and general information. Here's a summary of the key points:

### Adhesive Properties

**Formulations**
- **Formulations A,B,C**
  - Expected Working Life @ 4.5°C (40°F): 3 – 6 months
- **Formulations D**
  - Expected Working Life @ 4.5°C (40°F): 6 – 12 months
- **Form / Viscosity @ 25°C Blend**: High viscosity thixotropic liquid

**Application Instructions**
These formulations will usually provide moderate bond strengths on metals lightly contaminated with drawing oils (<200 mg/sq. ft.). However, for optimum bond strengths, surfaces to be bonded should be clean and free of dust, dirt, grease, oil or other contaminants. It is recommended to roughen bonding surfaces. This can be accomplished with abrasive media appropriate for the materials being bonded (such as medium grit emery paper, abrasive disks, grit blasting, wire brushes, etc.). Abrasion should always be followed by degreasing to remove contaminants and loose particles. Chemical etching is another method to provide a rough surface for improved adhesion.

Apply by spreading a thin film approximately 0.005 inch thick over the surface to be bonded. Maintain light pressure during cure for optimum bonding.

**Cure Schedule**
1 hour @ 121°C (250°F) or 30 minutes @ 150°C (300°F)

1. Test coupons were lightly coated with drawing oil.
2. Cure cycle simulated automotive paint bake cycle: 15 minutes @ 157°C (315°F) followed by 60 minutes @ 25°C (77°F), followed by 30 minutes @ 121°C (250°F).

### Storage Recommendations

Recommendations regarding storage conditions can be obtained by visiting our website at www.hexion.com.

### General Information

These are starting formulations and are not proven in the user’s particular application but are simply meant to demonstrate the efficacy of the products and to assist in the development of the user’s own formulation. It is the user’s responsibility to fully-test and qualify the formulation, along with the ingredients, methods, applications or equipment identified herein (“Information”), by the user’s knowledgeable formulator or scientist, and to determine the appropriate use conditions and legal restrictions, prior to use of any Information.

### Safety, Storage & Handling

Please refer to the MSDS for the most current Safety and Handling information.
(MSDS) for these and all other products being used are understood by all persons who will work with them. Questions and requests for information on Hexion, Inc. (“Hexion”) products should be directed to your Hexion sales representative, or the nearest Hexion sales office. Information and MSDSs on non-Hexion products should be obtained from the respective manufacturer.
