Starting Formulation

SF 7011
General Purpose Electric Molding Compounding
EPON™ Resin 1002F

Introduction
This general purpose electrical molding compound provides good mechanical and electrical properties for transfer or compression molding of electrical and electronic components. The combination of tetrachlorophthalic anhydride and 3,3',4,4'-benzophenone tetracarboxylic dianhydride provides acceptable cured state properties at a low press cycle temperature of 150 °C.

Compounding
Grind components not supplied in powder form to a particle size finer than 50 mesh using a hammermill. All anhydrides need to be approximately 325 mesh. Add raw materials in the order given and blend to a homogeneous mix. A Twin-Shell blender equipped with an intensifier bar works well for this step. Charge the loose powder in the feed hopper of a single or double screw extruder, or a 2-roll mill, between 71 and 88 °C. Granulate to between 8 and 50 mesh for general purpose use or press into preforms after granulating for subsequent molding.

Molding Conditions
Satisfactory cures can be achieved in 1 to 4 minutes at 120 to 180 °C in a transfer press. A press cycle time of less than 2 minutes is practical for parts molded in the temperature range of 150 to 180 °C. A useful transfer pressure range is 500 to 2,000 psi.

General Information
These are starting formulations and are not proven in the user’s particular application but are simply meant to demonstrate the efficacy of the products and to assist in the development of the user’s own formulation. It is the user’s responsibility to fully-test and qualify the formulation, along with the ingredients, methods, applications or equipment identified herein (“Information”), by the user’s knowledgeable formulator or scientist, and to determine the appropriate use conditions and legal restrictions, prior to use of any Information.

Safety, Storage & Handling
Please refer to the MSDS for the most current Safety and Handling information.

Exposure to these materials should be minimized and avoided, if feasible, through the observance of proper precautions, use of appropriate engineering controls and proper personal protective clothing and equipment, and adherence to proper handling procedures. None of these materials should be used, stored, or transported until the handling precautions and recommendations as stated in the Material Safety Data Sheet (MSDS) for these and all other products being used are understood by all persons who will work with them. Questions and requests for information on Hexion Inc. ("Hexion") products should be directed to your Hexion sales representative, or the nearest Hexion sales office. Information and MSDSs on non-Hexion products should be obtained from the respective manufacturer.
