In cementing, foam created during mixing can cause pump cavitation and decrease cement density, consequently impacting the strength of the cement.

Hexion's X-Air™ L liquid cement antifoam is designed to prevent air entrainment and control foam in cement systems, improving accuracy of slurry density readings. The system utilizes a unique chemistry that is more efficient than the competition and applicable in a variety of cement systems.

Key Features and Typical Benefits

- Decreases foam formation in cement systems
- Effective in both systems containing polyvinyl alcohol (PVA) and surfactants
- Liquid formulation allows for on-the-fly addition and adjustments

Highly Effective in a Variety of Systems

### Antifoam Comparison in Slurry With PVA

![Antifoam Comparison Graph](image)

The X-Air L liquid cement antifoam is over twice as effective as the competitor at 0.1% and almost four times as effective at 0.2%.

### Antifoam Comparison in Slurry With Surfactant

![Antifoam Comparison Graph](image)

The X-Air L liquid cement antifoam is over twice as effective as the competitor at 0.1% and six times as effective at 0.2%.

Product Safety, Handling, and Storage

Always wear proper PPE, gloves and safety glasses, and wash hands and face after handling. Use only with adequate ventilation and wear an appropriate respirator if necessary. Keep product in the original container or an approved alternative made from compatible material. Do not reuse empty containers as they may contain hazardous residue.

Store in original container protected from direct sunlight in a dry, cool, and well-ventilated area away from strong oxidizers, food, and drink. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Limitations

Customers must evaluate Hexion products and make their own determination as to the fitness of use in their particular applications.
